How to open FaceFlow

macOS blocks apps from unidentified developers by default. Choose any one of these three methods to allow FaceFlow to launch. You only need to do this once.

1 Right-click → Open (recommended)

- Open the Applications folder in Finder.
- Right-click (or Control-click) FaceFlow.
- Choose Open, then click Open in the warning dialog.

2 System Settings → Privacy & Security

- Try to launch FaceFlow once (macOS will block it).
- Open System Settings → Privacy & Security.
- Scroll down and click Open Anyway next to FaceFlow.

3 Terminal (power users)

- Open the Terminal app.
- Paste this command and press Return:

```
xattr -dr com.apple.quarantine /Applications/FaceFlow.app
```

- Launch FaceFlow normally after the command completes.
